RE: Cyanokit
DATE: June 24, 2014

INFORMATIONAL BULLETIN IB-14033

The Department has received three Cyanokits through various grant funding. One will be provided for each EMS transport station. The Cyanokit should be carried on the first run medic unit and swapped out when the units run status is changing. The Cyanokit should be stored in the locked drug box compartment.

The use of the Cyanokit is covered in the Lord Fairfax EMS Council Pre-hospital Standard Patient Care Treatment Protocols in section 4.27.10 Exposure-Cyanide and additional information related to the kit can be found in section 6.17 Hydroxocobalamin (Cyanokit). Personnel should review the appropriate protocol sections ASAP.
